

KEY FEATURES

- ◊ Pay-as-you-go subscription model

- ◊ No capital outlay

- ◊ Plug-and-play deployment

- ◊ Portal-based administration

- ◊ Centralized policy enforcement

- ◊ Secure, multi-tenant architecture

AirTight Cloud Services™

AirTight Cloud Services™ are cloud-based managed services that extend AirTight's pioneering SaaS wireless security and compliance solutions to include secure enterprise Wi-Fi access.

Services

The following three modules comprise AirTight Cloud Services suite.

Wireless Security: Powered by world's best wireless intrusion detection and prevention (WIDS/WIPS) technology, SpectraGuard®, this service provides 24/7 automated monitoring and mitigation of rogue wireless devices and other wireless vulnerabilities and threats.

Regulatory Compliance: This service enables organizations across different industries to meet wireless security requirements within regulatory compliance standards such as [PCI DSS](#), HIPAA, [DoDi 8420.01](#), SOX, GLBA and MITS. Pre-defined compliance analysis and reporting simplifies compliance audits. Administrators can choose to have a compliance report

periodically delivered to their inbox.

Wi-Fi Access: Branded as AirTight Secure Wi-Fi™, this service simplifies deployment and centralized management of hundreds or thousands of geographically distributed Wi-Fi networks, and costs significantly lower as compared to traditional enterprise Wi-Fi solutions. Enterprises can now roll out and control Wi-Fi at remote locations (e.g., branch offices, teleworker homes, guest Wi-Fi hotspots) without worrying about limited budgets and IT staff. In addition to the high-speed (802.11abgn) Wi-Fi and WPA/WPA2 with 802.1x and PSK authentication, key features of this service include: guest Wi-Fi access with customizable captive portal and walled garden for value-added services, DNS-based content filtering, SSID to VLAN policy mapping, and background scanning for Wi-Fi threats.

**About
AirTight Networks**

AirTight Networks is the global leader in wireless security and compliance products and services, providing customers best-of-breed technology to automatically detect, classify, locate and block all current and emerging wireless threats. AirTight offers industry’s leading wireless intrusion prevention system (WIPS) and the world’s only SaaS based wireless security, compliance and Wi-Fi access branded as AirTight Cloud Services™. AirTight’s award-winning solutions are used by customers globally in the financial, government, retail and hospitality, manufacturing, transportation, education, health care, telecom, and technology industries. AirTight owns the seminal patents for wireless intrusion prevention technology with 24 U.S. and international (U.K, Australia, Japan) patents granted, and more than 20 additional patents pending. AirTight Networks is a privately held company based in Mountain View, CA. For more information please visit: www.airtightnetworks.com.

Architecture

Plug-and-play deployment: Pre-configured wireless sensor/AP devices that automatically connect and synchronize with the central server, literally enable plug-and-play deployment at remote locations in minutes without the need for intricate configuration or local IT support.

Portal-based administration: Administrators can securely access the central management console via their web browser from anywhere on the Internet. From a single console, they can remotely manage everything from defining policies, viewing and

responding to wireless security alerts, setting report delivery schedule to quickly changing device settings for all or selected locations. For instance, you can change the mode of the wireless device from full sensor to sensor-AP combo or vice-versa with a single click on the console.

Secure data center: Wireless scan data is securely processed and stored in SAS-70 certified secure data centers architected for high availability. Access is controlled through a triple layer authentication. Multi-tenant architecture enables complete data segregation and privacy for individual customers.

Flexible, Subscription-based Pricing

With a pay-as-you-go subscription model, organizations incur no upfront capital investment. Organizations have the option to start with the PCI wireless compliance service and then upgrade the service to full wireless intrusion prevention or to include secure Wi-Fi access in the future with no IT intervention and no additional hardware.

Service		Features
PCI Wireless Compliance		<ul style="list-style-type: none"> Automated wireless scanning & compliance reporting Real time alerts
