

SpectraGuard® Managed Network Console

Centralized Visibility with Unlimited Scalability

MANAGEABILITY FOR THE LARGEST ENTERPRISES

- Manager of manager console for large global WIPS deployment

- Aggregation of performance and vulnerabilities across multiple servers

- Centralized alarms and reporting from thousands of sensors and millions of devices

- Easy drill down into specific servers, sensors, devices

Secure and Manage Millions of Wireless Devices

SpectraGuard MNC provides the manager of manager functionality to scale WIPS deployments globally.

SpectraGuard MNC will help you manage a network of millions of wireless devices across a country or around the globe—giving you visibility into where you have performance issues, where you may have threats, and where you may be under attack.

Tiered Network Architecture

AirTight’s tiered architecture enables you manage millions of devices from a single console.

- SpectraGuard MNC manages and consolidates information globally
- SpectraGuard Enterprise appliances secure, manage, and consolidate information from multiple sensors

- SpectraGuard Sensors protect and consolidate information within their RF coverage range
- SpectraGuard SAFE software protects laptops when they’re in or out of the office

Remotely Troubleshoot Your Wireless Connections Around the Globe

SpectraGuard MNC empowers you to drill down into specific wireless connections or devices—and launch troubleshooting and diagnostic tools—anywhere on the globe—without needing to dispatch personnel—saving time and money.

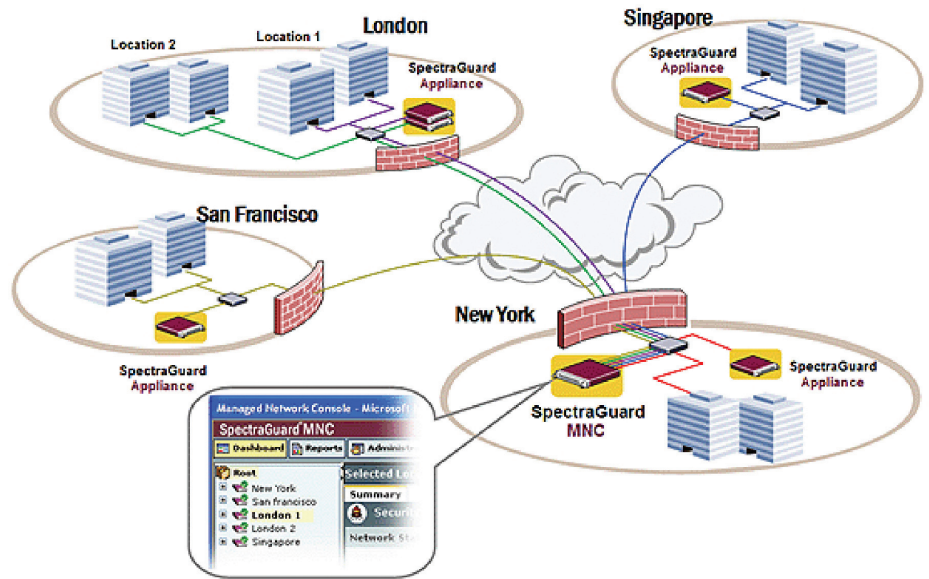

Multi-tiered Administration

SpectraGuard MNC allows for four administrative roles on the system—Super-User, Administrator, Operator, and Viewer—that provide different levels of rights or capabilities to that user.

**ABOUT
AIRTIGHT NETWORKS**

AirTight Networks, the industry standard for wireless vulnerability management, is the only company that offers customers a flexible, end-to-end solution that gives them visibility into their wireless security posture and a choice in how to manage it. AirTight provides full wireless intrusion prevention systems (WIPS) and the world's first on demand wireless vulnerability management service. AirTight's patented technology delivers the key elements of an effective WIPS to eliminate false alarms, block wireless threats immediately and automatically and locate wireless devices and events with pinpoint precision. AirTight's customers include global retail, financial services, corporate, education and government organizations. AirTight Networks is a privately held company based in Mountain View, CA. Multiple/Different Wlan Security Policies for Different Regions of the Globe

Utilizing SpectraGuard MNC, enterprises can implement different WLAN security policies for different geographies, different sites, or even different VLANs.

Place servers, management consoles where it makes sense

The MNC architecture allows your enterprise to place SpectraGuard Enterprise appliances where it makes sense in your network:

- to match with the physical location of your administrative staff
- to manage/conservate network bandwidth
- to provide a single console for management, reporting, and visibility
